Sample Practice Question & Explanation

Here's a typical question you might find in the JB Review guide, followed by a detailed answer that illustrates the reasoning process.

Which of the following statements about the handling of Schedule II controlled substances is correct?

1. They can be stored in a locked cabinet for up to 30 days.
2. Only pharmacists may dispense them; technicians cannot assist.
3. They must be logged in a daily inventory log that is retained for 6 months.
4. They can be dispensed without a prescription if the patient has a prior history.

Correct Answer: C

Explanation: According to DEA regulations, all controlled substances, including Schedule II, must be logged in a daily inventory log that is retained for at least six months. Option A is incorrect because storage must be in a locked cabinet with limited access, but the duration is not specified as 30 days. Option B is incorrect; technicians can assist under direct supervision. Option D is a violation of federal law.
